USER INSTRUCTIONS

General protector device PKS-285-

Uses

The protector is meant to be mounted as a protective device onto drilling machines, engraving machines, and small milling machines.

Dimensions

The actual protector plate has a size of 260 x 280 mm. It has a PC plate window, and the window opening is 170 x 200 mm in size. The inner arm of the protector leverage is 510 mm in length and the outer arm is 485 mm in length. The protector has a total mass of approx. 6 kg.

Installation

The user himself can install the protector onto the frame of the machine by means of a separate fastening console. Two M10 screws are needed when fastening the protector. When placing the fastening console, sufficient room must be left for the protector plate movement.

If unclear on any aspect of this, please contact the manufacturer.

Operation

The ball-and-joint attachment enables the protector plate to be turned to the desired position. Adjusting the height of the protector plate is arranged by pressing the handle down. When the handle is released, the protector plate is locked to the desired height. For sideways adjustment, grip the protector arm and move as necessary. The friction brake located at the foot of the leverage prevents unintentional sideways movement.

Inspection and maintenance

The protector plate should be kept clean in order to maintain good visibility. If severely scratched or cracked, the protector plate's PC plate must be replaced with a new one. Microfibre cloths and mild dishwashing detergent should be used when wiping a PC plate. If the protector plate has been dented, e.g. the levers are bent or the gas-powered spring is broken, the broken parts must be replaced with new parts. The friction brake needs to be re-tensioned as necessary.

The warranty period is two (2) years from the date of purchase; the PC-plate is not covered by the warranty.
