USER INSTRUCTIONS

Lathe guard equipment SLS-103-

Hses

This set of equipment is meant to protect the user from shavings and lathe liquids and to prevent the user from becoming entangled in the lathe chuck. This set of lathe shavings protection equipment is suited for almost all pivot lathes.

Dimensions

Chip quard:

The protector plate is 525×470 mm in size. It is provided with a PC plate window. The opening is 330×420 mm in size. The maximum diameter of work piece is 500 mm (and for a shaving protector with an extended glass frame it is 650 mm).

Chuck quard:

The protector is meant to be used as protection over the lathe chuck with chuck diameters not exceeding 400 mm. The chuck protector is 200 mm in width.

Installation

The installation instructions are provided separately.

Operation

The chuck protector and shavings protector can be moved to the desired position along the steering rail. The chuck protector's micro-enclosure prevents the chuck protector from being moved to the right of the chuck (does slide to the left, though) and it causes the chuck protector to go to the correct position. Adjust the protector plate's angle as required by using the handle.

Inspection and maintenance

The protector plate should be kept clean in order to maintain good visibility. If severely scratched or cracked, the protector plate's PC-plate must be replaced with a new one. Microfibre cloths and mild dishwashing detergent should be used when wiping a PC plate. If the protector has been dented, e.g. the levers are bent, the damaged parts must be replaced with new parts. Check the tightness of the screw regularly. The functioning of the microswitch needs to be tested regularly. (E.g. weekly).

The warranty period is two (2) years from the date of purchase; the PC-plate is not covered by the warranty.
